## JAVASCRIPT EXECUTOR

### WE USE THIS METHOD TO...

- To perform the Scrolling Operation.
- Perform Action on the disabled Element

### THERE ARE TWO METHODS OF JAVASCRIPT EXECUTOR IS

ExecuteScript(String,object)  
ExecuteAsyncScript()

### The Return type of methods is object###

### IT CONSIST OF TWO OBJECT

- 1.Window
- 2.Document

### If you want perform Scrolling operation in JS there are two methods

- **ScrollBy()** :- With help of this method we can do the scrolling on the page vertically & Horizontally
- **ScrollTo()** :- It is used to scroll the entire page to Up and Down with help of document object call  
document

## If we want to click the Disabled Button or text

1. Call The Object

2. You have to call the Anonymous Function (inside the anonymous function there is [default variable] and it is called as Arguments and it will be in the form of array and the index starts from 0.

# if you want to perform action on single element then call Argument[0]

# if you want to perform action on two elements then call Argument[0]&Argument[1]
